

Sapura Power Services (SPS)

SPS specialises in engineering services in the areas of field maintenance services and repair & refurbishment of industrial gas turbines including their components.

OUR CAPABILITIES

Our technical capabilities encompass all types of industrial gas turbines.

Whether it is for planned shutdowns or emergency repairs, our highly skilled technical team is fully equipped to perform on-site maintenance inspections and overhaul activities.

SPS has established a regional repair, maintenance and refurbishment facility (MARS) in Malaysia and we have more than 10 years experience in turbo machinery services. We have the expertise to refurbish critical components in the hot gas path such as rotating blades, stationery vanes, shrouds, heat shields, hot gas casing, inner liners, burner cans, combustion hardware, transition pieces and others.

SPS has a joint agreement with GE Oil & Gas to expand and enhance our current facility into a Regional Service Centre. We will use the most advanced service and repair technologies from GE Oil & Gas to achieve the highest quality standards for our customers.
