

TL Geohydrographics

STOP WORK POLICY

TL Geohydrographics is committed to continuous efforts to make its operations an Injury Free Workplace and towards the preservation of the environment. TL Geohydrographics supports this safety philosophy in the belief that all of us can prevent injury, pollution of the environment and damage or loss to company property.

It is TL Geohydrographics policy that all employee and contractor staff have the obligation to intervene, and to call for "Stop Work" if necessary during any perceived unsafe activity or operation when there is an immediate threat to the safety and health of the individual, company property or which may cause adverse effect to the environment.

All employees of TL Geohydrographics will conduct their duties and responsibilities in a manner that is compatible with achieving these goals and in carrying out this policy. All employees have the responsibility to eliminate behaviour in themselves and others at workplace, which may cause risk of accident.

The individual's right to stop any work if they have safety concerns or if they believe additional controls are needed to minimise HSE risks has the full support of TL Geohydrographics management. In the event of doubt whether work should stop due to an unsafe situation or condition, employee and contractor staff, should immediately stop work and notify the hazardous situation to their immediate supervisor. No job is so urgent and critical that it cannot be conducted in a safe and environmentally responsible manner.

TL Geohydrographics will continuously promote and reinforce its commitment to all members of the workforce in treating this safe operating practice as one of the company's most important assets.

W. A. Petrie
